(54) DEVICE FOR SUPERIMPOSING PHONE INFORMATION AND TELEPHONE SET

(57)Abstract:

PROBLEM TO BE SOLVED: To protect privacy and personal information leaked by information of a life environment communicated to a communication opposite party through a phone call.

SOLUTION: When a portable telephone 300 is set to a speech mode, a mixing control section 352 starts the operation to read a schedule stored in a schedule management section 356 and a sound of a life environment in response to a real time from a storage management section 354 and sequentially transmits them to a mixer section 358. Thus, an opposite party making a speech by using the portable telephone 300 hears a mixture of a sound of the life environment scheduled in advance and a speech transmitted from a user picked up by a microphone 304. Furthermore, a display instruction section 360 displays the sound of the life environment reproduced at present and a schedule management section 356 stores the telephone number of the speech

opposite party, the sound of the reproduced life
environment and its time.
